

Docoon selects OUTSCALE to host its Approved Platform for electronic invoicing “Docoon Invoice”

- As of today, all French companies subject to VAT will be required to receive their invoices in electronic format as part of the e-invoicing reform
- Docoon hosts its Approved Platform Docoon Invoice on OUTSCALE's sovereign Cloud infrastructure, SecNumCloud 3.2 qualified, ANSSI's most demanding framework
- Objective: secure the processing of tens of millions of invoices, with the ambition of eventually covering 5% of the total volume of invoices affected by the reform

Paris, September 1 2026 – **Docoon**, a French publisher of digital solutions for communication, dematerialization and secure document flow management, announces the hosting of its Approved Platform Docoon Invoice on the sovereign infrastructure of **OUTSCALE**, the Cloud and AI infrastructure brand of Dassault Systèmes, SecNumCloud qualified.

A reform that leaves no room for error

As of today, all French companies subject to VAT must be able to receive their invoices in electronic format; large enterprises and mid-sized companies (ETI) must simultaneously be able to issue them via an Approved Platform, under penalty of financial sanctions. For companies, the choice of platform therefore becomes critically important.

For Docoon, which aims to eventually process 5% of the total volume of invoices from companies affected by the reform, the stakes were high: finding a hosting provider capable of absorbing very high volumes while guaranteeing the availability, security and sovereignty of data, and keeping pace with the growth rate driven by the reform.

To meet this requirement, the Docoon Invoice offering relies on an OUTSCALE Cloud infrastructure, SecNumCloud qualified by ANSSI, meeting high requirements for data security, confidentiality and sovereignty.

A sovereign, proven infrastructure

OUTSCALE is Dassault Systèmes' sovereign Cloud and AI infrastructure brand. It was the first Public Cloud operator to be SecNumCloud qualified by ANSSI in 2019.

“OUTSCALE stood out during our evaluation process through the flexibility of its offering and the quality of its support,” said Damien Maitrot, R&D Director, Docoon.

OUTSCALE provides a fully operational Cloud offering, proven in production, with a dedicated cluster, an isolated control plane and no sharing of resources with other organizations.

A joint deployment, from an initial building block to a high-availability architecture

The deployment was carried out jointly by Docoon's R&D and infrastructure teams and OUTSCALE's teams, focusing on defining the target architecture, securing access and data flows, and performance and resilience testing. Docoon has implemented a robust, redundant solution spread across several OUTSCALE zones.

“Supporting Docoon in hosting ‘Docoon Invoice’ means operationally addressing the needs created by the e-invoicing reform. The platforms that will process tens of millions of invoices need a mature, available and fully sovereign infrastructure. OUTSCALE's qualifications and certifications, combined with our experience

of large-scale production with Dassault Systèmes, allow us to support Docoon's growth with the level of rigor required by a subject as structuring as e-invoicing," adds Jérôme Sandrini, Chief Revenue Officer, OUTSCALE.

Docoon Invoice, an Approved Platform designed for complex flows and industrial volumes

Docoon Invoice enables companies to issue, receive and transmit their electronic invoices, manage their e-reporting obligations and track the various regulatory statuses of their flows. The platform is built on an API-first approach, making it easy to integrate with ERP systems, accounting software, CRMs and management solutions. It supports the regulatory formats Factur-X, UBL and CII, and includes electronic signature, timestamping and legally compliant archiving capabilities. Docoon Invoice is also expanding internationally, notably via PEPPOL and the upcoming developments linked to ViDA (VAT in the Digital Age). The solution also offers, as a complement, a multichannel communication module (SMS, email, WhatsApp, RCS, fax).

Designed for mid-sized companies (ETI) and large enterprises with high volumes, the solution is also offered white-label or grey-label to publishers and integrators wishing to embed it in their own offerings.

Docoon is also exploring new artificial intelligence use cases around Docoon Invoice and sees the sovereign AI offering announced by OUTSCALE as a possible avenue for the future of the partnership.

"Docoon Invoice already processes more than 25 million invoices a year, but we have a much more ambitious project for the solution. To support this trajectory, we found in OUTSCALE the sovereign, highly secure infrastructure, capable of supporting the industrial scale-up we needed. OUTSCALE won us over with its technological expertise and the quality of its support. After this first deployment phase, our teams were very satisfied with the infrastructure," concluded Arnaud Lejeune, CEO, Docoon.

About OUTSCALE

OUTSCALE, a Dassault Systèmes brand, is the first sovereign and sustainable Experience-as-a-Service operator. Revolutionizing the way organizations operate through our virtual twin approach, we give institutions and companies the ability to fully leverage their data, thereby optimizing their operations and fostering collaboration across all sectors. At OUTSCALE, we place sovereignty at the heart of our solutions, enabling our customers to retain full control of their strategic information while benefiting from cyber-governance and our Cloud expertise. As a responsible player, we optimize the energy efficiency of our infrastructures and encourage our customers to adopt sustainable practices.

About Docoon

Docoon is a French software publisher specializing in the digitalization and security of companies' document flows and communications. Its solutions cover in particular e-invoicing, process dematerialization and multichannel communication.

With Docoon Invoice, its Approved e-invoicing Platform, Docoon supports mid-sized companies (ETI), large enterprises, publishers and integrators in complying with the e-invoicing reform. Designed to handle large volumes and integrate at the heart of information systems, the platform is available in SaaS mode, via API, as well as white-label or grey-label.

More broadly, Docoon develops modular solutions that enable companies to digitalize, automate and secure their document exchanges and processes, with particular attention paid to compliance, security and continuity of service.
